

How does PROTECTPRO TECHNOLOGY work?

Thank you for your interest in ProtectPro Technology.

ProtectPro was developed to address what I believe are harmful effects associated with electromagnetic radiation from mobile phones, Wi-Fi, Bluetooth devices and other wireless technology.

Naturally, you may want to know: **How does it work?**

That is a fair question, and in the following pages I will explain what I can about the principles behind my proprietary technology.

But there is another question that may be even more important:

Does it work?

Think about it.

When you bought your mobile phone, did you ask exactly how it works?

Did you ask what happens inside your body when you hold that technology against your head?

Did you investigate whether there could be unwanted biological effects?

Most likely, you did what billions of people have done - you simply used it.

We are surrounded by technologies and products that have become part of everyday life, yet very few of us fully understand how they work — or question whether they might have unintended consequences.

For me, that changed about twenty years ago. My first-born grandson and I both experienced serious health problems that I came to associate with our use of mobile phones. That experience caused me to start asking questions.

Those questions led to years of research and development — and eventually to the creation of my first protection product: “CELL” protection for mobile phones.

Today, “CELL” is part of ProtectPro Technology.

In the pages that follow, I want to show you why I developed it, what it is designed to do, how it has been tested, and the evidence on which I base my conclusions. You can then make up your own mind.

So, let's begin.

In Love & Gratitude

Norbert Heuser

**ProtectPro
Technology**

Introduction to the ProtectPro Technology

PART 1

Products & Applications

YOU ONLY NEED **3 PRODUCTS** TO PROTECT YOUR LIFE FROM HARMFUL EMR

100% Protection From Harmful Electromagnetic Radiation
4G, 5G & even 6G, Wifi, Bluetooth, and Magnetic Radiation.

1

CELL Mobile Phone Protection

"CELL" for Mobile Phone Protection, including Bluetooth personal devices like Smart Watches, Headsets, Ear Buds, etc....

2

Smart Defender SD9-2 Personal Body Protection

SD9-2 Your personal body protection. Wear as pendant or in pocket. For pets too. Alternatives for protecting more than your body but larger spaces:

SD9-5 5m 15ft radius, covering small spaces like desk, computer desk top set up etc.

SD9-10 10m 30ft radius, covering medium spaces like studio, office, hotel room.

SD9-50 50m 150 ft radius, covering large spaces, residential & commercial properties.

3

Smart Defender SD 4 Vehicle & Travel Protection

Vehicles on land, water and in the air which run on Gasoline, Hybrid or Electric, including Air Planes all create harmful Magnetic & Electromagnetic Radiation.

SD 4 protects your from all the above plus from Cosmic Radiation as needed for Air Travels.

SD 4 protects you from various radiation when on the plane.

*It's easy to feel safe,
when you are protected by ProtectPro!*

*It's easy to feel safe,
when you are protected by ProtectPro!*

Mobile Phone Protection “CELL” by ProtectPro

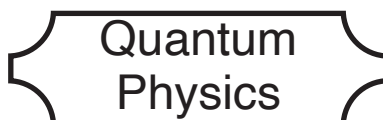

Protects you from harmful electromagnetic radiation 4G 5G and even 6G.

Spherical Coverage: 2 meters (≈ 6 ft) in radius 4 meters (≈ 12 ft) in diameter.

5 Year Warranty. Made in Germany. Based on Quantum Physics.

Applications:

all types of Mobile Phones, Cordless Phones, Laptops, Tablets, also covers Bluetooth devices in protection space: Smart Watches, Earbuds, AirPods, Headsets, Gaming Consoles, Baby Monitors

BESA Institute
scientifically
tested & certified.

ProtectPro Protection 4G 5G 6G

100% Protection from electromagnetic radiation, magnetic radiation and more.

SD9-1 SD9-5 SD9-10 SD9-50

We nullify electromagnetic radiation in short EMR and other radiation of the following harmful technical components, products and environments not on the physical level but all in the frequency domain of Quantum Physics :

All natural occurring electromagnetic radiation = geopathic radiation** & manmade EMR like:
Mobile Phones – WiFi – Transmission Towers – Transmitters – Smart Meters – Monitors –
Radar-Radiation – Solar Energy Systems – AC/DC – Heavy Current – High and Low Voltage –
LED Lighting – Fluorescent Tubes – Blue Light – Tablets – Smart Watches – Laptops – Ear Pads –
AirPods – Headsets – Cordless Phones – Baby Monitors

**Geopathic Radiations are naturally occurring electromagnetic radiations that harm the human body, certain animals, and plants. For details please visit: <https://protectpro.net/geopathic-zones>

Podcast How Mother Earth Causes Cancer - Geopathic Radiation https://www.youtube.com/watch?v=_s5E3u840Pw

The Smart Defender devices as shown below, form a spherical field of a 360 degree protection. Placing the product like SD9-50 on the ground floor of a house i.e. also covers space below in the basement and above on the second floor and the third floor.....

The coverage field depends on the specifications of which of the four models is used.

SD 9-50

Spherical coverage:
50 meters (≈ 150 ft)
in radius
100 meters (≈ 300 ft)
in diameter

SD 9-10

Spherical coverage:
10 meters (≈ 30 ft)
in radius
20 meters (≈ 60 ft)
in diameter

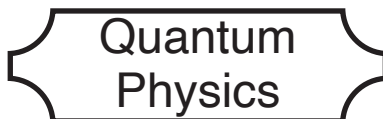

SD 9-5

Spherical coverage:
5 meters (≈ 15 ft)
in radius
10 meters (≈ 30 ft)
in diameter

SD 9-2

Spherical coverage:
2 meters (≈ 6 ft)
in radius
4 meters (≈ 12 ft)
in diameter

BESA Institute

**ProtectPro
Technology**

Introduction to the ProtectPro Technology

PART 2

Basics of the Technology

“If you want to find the secrets of the universe,
think in terms of energy, frequency and vibration.”

Nikola Tesla (1856-1943)

Hyperspace & Reference Space

ProtectPro is my proprietary technology, developed together with my team in Germany and based on principles of Quantum Physics. During its development, we studied the work and discoveries of some of the great thinkers and physicists of the past, including Max Planck, Albert Einstein, Nikola Tesla, Royal Raymond Rife and, in particular, the extraordinary German physicist Burkhard Heim (1925–2001).

Burkhard Heim is far less known to the general public than many other physicists. Yet, his life's work and discoveries are remarkable. His personal story is equally extraordinary and to me, one of the most unusual biographies I have ever encountered.

Heim developed a highly complex mathematical description of our world that extended beyond the material reality we can see and physically measure.

For the purpose of understanding ProtectPro Technology, two areas described in Heim's work are particularly important:

Reference Space — the energy/material level

Hyperspace — the information level

The Reference Space represents our material and energetic world. It includes the physical things and phenomena surrounding us — people, animals, plants, buildings, machines etc.

The Hyperspace represents the non-material informational level.

Heim's work described connections between these different levels and mechanisms through which they can interact. These connections are referred to as interaction channels.

In simple terms:

Reference Space = energy and matter

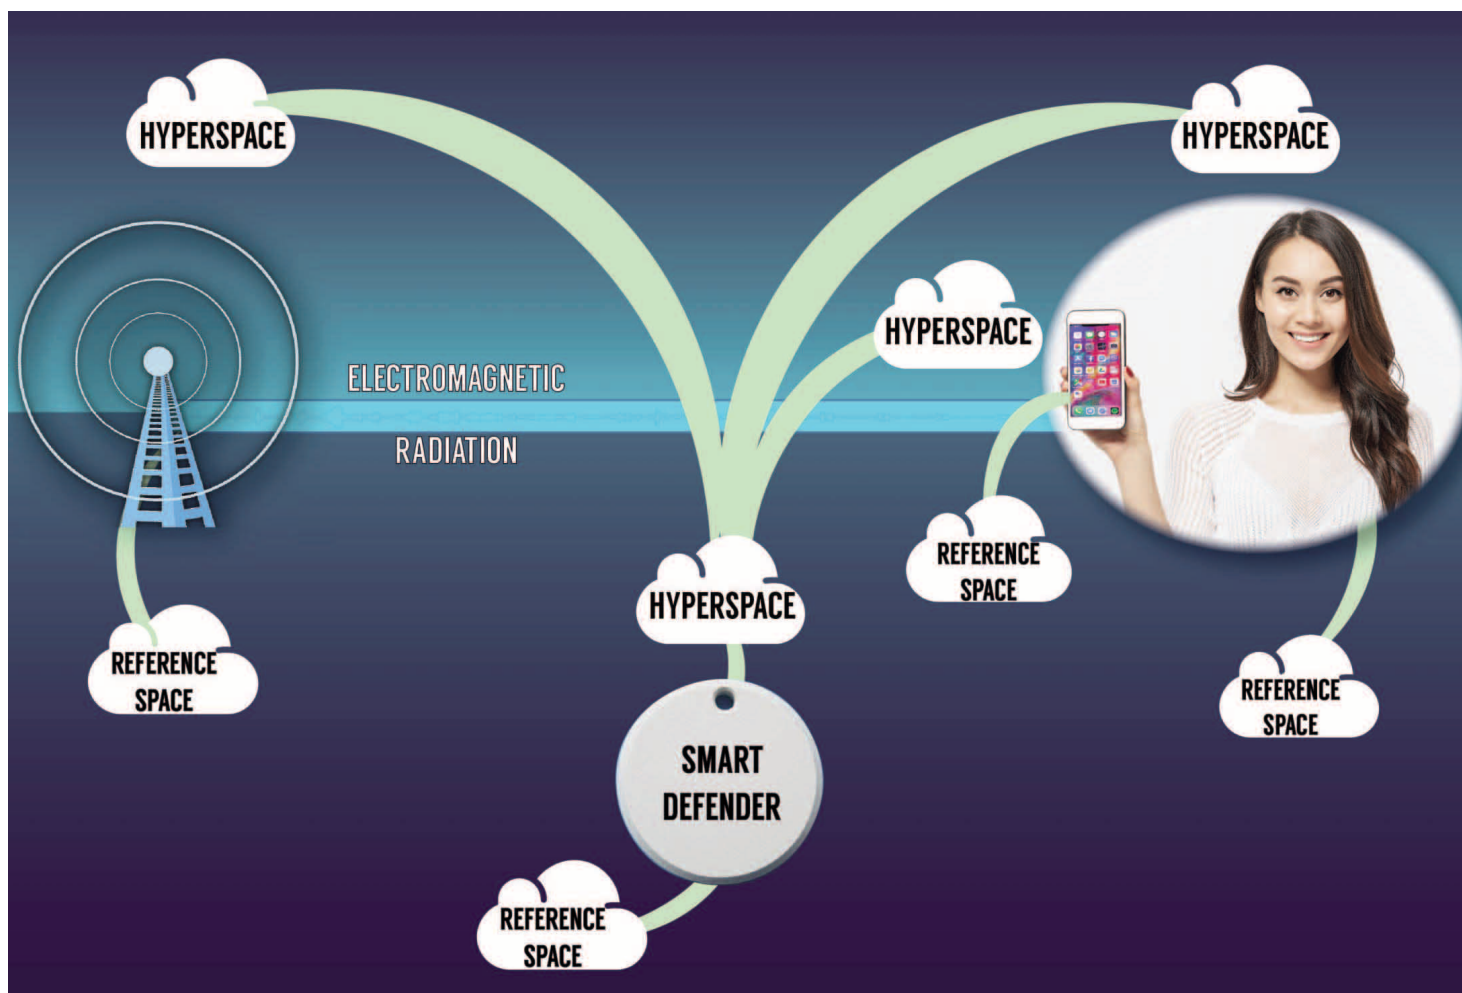

Hyperspace = information

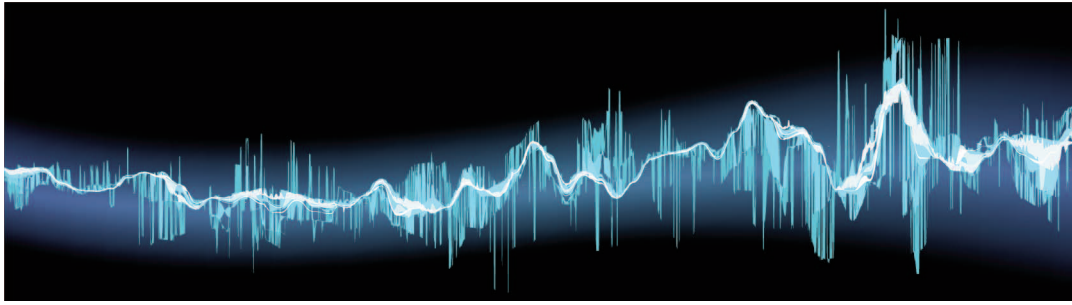

According to Heim's theoretical work, the material world does not exist independently from this informational background. Material structures have corresponding informational structures and interaction between these different levels is possible.

Visible and Invisible Energy/Matter

Much of the matter in Reference Space is visible to us — people, animals, plants, cars, buildings, and countless other physical objects. However, not everything belonging to this physical and energetic level can be seen. Electromagnetic radiation, geopathic radiation, cosmic radiation, air, gravity, and electricity are examples that are not directly visible to the human eye, yet still belong to what we describe here as Reference Space.

During Heim's lifetime and after his death, scientists and technicians continued examining his extensive mathematical work. Using increasingly powerful computers and mainframe systems, calculations based on Heim's theories were carried out.

This work became especially important to us because it offered a completely different way of looking at a question that lies at the heart of ProtectPro Technology:

What if we do not have to change the physical energy itself — but instead address the information associated with it? This is where the story of ProtectPro begins.

Two Simple Examples

To make the difference between Reference Space and Hyperspace easier to understand, let us look at two everyday examples.

1. A Transmission Tower

A transmission tower exists physically in the Reference Space. The electromagnetic radiation it transmits is also part of the physical and energetic level — even though we cannot see it with our eyes. According to the principles described earlier, this physical source has a corresponding informational level in Hyperspace.

2. A Mobile Phone

A mobile phone is another simple example. The phone itself is a visible material object in Reference Space. When operating, it generates and receives electromagnetic signals that also belong to the physical and energetic level. The mobile phone and its electromagnetic signals also have a corresponding informational level in Hyperspace. This distinction is fundamental to understanding ProtectPro Technology.

Where ProtectPro Technology Works

ProtectPro Technology does not attempt to eliminate the physical mobile-phone signal. It does not need to block the signal, shield the phone, or prevent the electromagnetic radiation (in short EMR) required for communication. If we eliminated the physical signal completely, the mobile phone could no longer perform its intended function.

Instead, ProtectPro Technology is designed to address the informational level — the Hyperspace associated with the source.

Using our proprietary inversion process, ProtectPro is programmed to nullify (neutralize or harmonize) the information associated with those frequencies that we have identified as disruptive or harmful to biological systems.

In simple terms:

The physical signal remains.

The disruptive information associated with it is addressed.

This is why the physical function of the device remains unchanged. A mobile phone can still make and receive calls. Wi-Fi can continue transmitting data. Bluetooth devices can continue communicating.

The Nullification takes Place on the Informational Level — in Hyperspace.

Within Heim's framework, interaction between the informational and material levels takes place through the interaction channels as previously explained. ProtectPro Technology applies this principle by addressing the informational level of the disturbing source.

This leads to one of the most important distinctions in understanding our technology:

ProtectPro does not claim to make the physical electromagnetic radiation disappear. It is designed to nullify what we have identified as its disruptive information at the informational level. This distinction also explains something that initially surprises many people:

An ordinary EMR measuring device may show exactly the same reading before and after ProtectPro is applied.

Why?

Because that measuring instrument measures the physical electromagnetic field in Reference Space.

ProtectPro is designed to create its change at the informational level. To understand why this matters, we need to look next at what conventional measuring devices can — and cannot — measure.

What Conventional Measuring Devices Can — and Cannot — Measure

Building biologists, technicians, researchers, and many individuals interested in EMR, use measuring devices to determine the strength of electromagnetic fields in their environment.

Let us take a simple example. Suppose a person is using a mobile phone and an EMR meter measures an exposure level of:

2,000 microwatts per square meter ($\mu\text{W}/\text{m}^2$)

Now we place our ProtectPro “CELL” with the mobile phone and repeat the measurement.

The meter may still show:

2,000 microwatts per square meter ($\mu\text{W}/\text{m}^2$)

Why?

Because ProtectPro is not designed to eliminate or reduce the physical electromagnetic signal in Reference Space.

The measuring device measures the physical quantity of EMR. It cannot measure the informational changes in Hyperspace that ProtectPro Technology is designed to address. This is where our quantum physics-based approach comes into play.

This distinction is extremely important.

The meter measures physical quantity.

ProtectPro addresses the informational level.

Here are four simple comparisons:

A Speedometer

A speedometer can tell us that a car is traveling at 60 miles per hour = Quantity.

But it cannot tell us whether the car is driving smoothly, whether the passengers are comfortable or safe, or whether the overall quality of the ride is good or bad = Quality.

The Speedometer measures speed — quantity — not the quality of the ride.

A Body-Weight Scale

A scale may tell us that a person weighs 180 pounds = Quantity.

But that number alone cannot tell us whether the person is healthy or unhealthy = Quality.

The scale measures weight — quantity — not the quality of health.

Gross Domestic Product

A Country's Gross Domestic Product can measure the monetary value of goods and services produced within its economy. But GDP alone cannot tell us whether the people living in that country are happy, healthy, secure, or enjoying a high quality of life.

The GDP measures economic output — quantity — not the quality of life.

The same principle helps explain the ProtectPro approach. A conventional EMR meter tells us how much physical electromagnetic radiation is present. ProtectPro Technology is not designed to make that physical reading disappear (Reference Space). According to our technology, the change takes place at the corresponding informational level (Hyper Space)

This is why we do not expect a conventional EMR meter to demonstrate the effect of ProtectPro simply by showing a lower physical reading.

The radiation remains physically measurable. What ProtectPro is designed to address is what we have identified as its disruptive harmful informational effect on biological entities.

The physical particles are not dangerous to biological objects but their frequencies.

Different Sources — The Same Principle

The principle behind ProtectPro Technology is not limited to one particular mobile phone, one frequency, or one generation of communication technology. Whether we are dealing with EMR from mobile phones, Wi-Fi, Bluetooth, transmission towers, electrical systems, magnetic fields, geopathic radiation, or cosmic radiation, the fundamental approach of ProtectPro remains the same.

We do not attempt to eliminate the physical source.

We address its disruptive information at the informational level.

This is particularly important when discussing modern communication technology

Why We Do Not Block the Signal

You need gas or electricity to drive a car. No gas — no driving. Very simple.

You need EMR to make a mobile phone call. No EMR — no mobile phone call. Very simple.

In order to use your mobile phone or Wi-Fi, you need EMR. When you make a mobile phone call, your phone communicates with the mobile network using electromagnetic signals. The same basic principle applies to Wi-Fi and Bluetooth. These technologies need electromagnetic signals in order to function.

If we blocked the signal, the devices could no longer communicate.

No signal = no phone call.

No signal = no Wi-Fi connection.

No signal = no Bluetooth communication.

This is why ProtectPro Technology takes a fundamentally different approach.

ProtectPro is not designed to block the electromagnetic signal.

The physical signal remains available so that the device can continue performing the function for which it was designed.

Instead, ProtectPro addresses the corresponding informational level in Hyperspace and is designed to nullify the disruptive EMR information associated with the source.

4G — 5G — 6G

The same principle applies regardless of the generation of mobile communication technology. 4G, 5G, and 6G use physical electromagnetic signals.

The frequencies, transmission methods, modulation, and technical characteristics may change as communication technology develops, but ProtectPro does not depend upon physically blocking those signals.

This is why our technology is designed to address: 4G, 5G, 6G, and future developments in wireless communication. As technology changes, our research and programming will also continue to change and evolve.

Blocking is Not Our Objective

Some products on the market are promoted on the basis of shielding or blocking EMR.

Complete blocking would prevent the phone from communicating with the network. That is not the principle behind ProtectPro. Our objective is not to make the physical electromagnetic field disappear. The technology must continue to work.

A mobile phone should remain a mobile phone. Wi-Fi should remain Wi-Fi.
Bluetooth should remain Bluetooth.

ProtectPro Technology is designed to leave the necessary physical communication intact while addressing what we have identified as the disruptive and harmful informational effect on biological entities. That distinction lies at the very heart of our unique, proprietary ProtectPro Technology developed and made in Germany based on principles of Quantum Physics. Keep the function. Address the harmful effect.

Why Reducing EMR is Not Our Solution

ProtectPro Technology follows a fundamentally different principle from products designed to reduce electromagnetic radiation.

Reducing EMR is not the solution. The signal remains, only at a reduced level. Some companies even advertise their products and claim EMR reduction of up to 60%.

Up to 60% means 20% ? or 40%? or 60%?

But that raises the further obvious question:

What about the remaining 40% of the dangerous EMR ?

You really think the remaining 40% of the dangerous EMR is now all of a sudden healthy?

You are save from EMR or not. You cannot be a bit pregnant.

We do not consider reducing the physical EMR signal to be the solution. Why?

Because electromagnetic signals are essential to modern wireless technology. If the electromagnetic signal were reduced, the technology would most likely be compromised. Modern society depends heavily on electromagnetic technology. Without it, many of the communication systems we now take for granted would no longer function.....

Reducing the signal is therefore not the objective behind ProtectPro Technology.

From the beginning, our goal has been different:

Do not fight the physical signal.

Do not interfere with the function of the device.

Address what we have identified as the harmful effect at the informational level (Hyper Space).

ProtectPro is not designed to reduce a physical EMR measurement from, for example, **2,000 $\mu\text{W}/\text{m}^2$ down to 1,000 $\mu\text{W}/\text{m}^2$ — or even to 100 $\mu\text{W}/\text{m}^2$.** (see definition next page)

That is not what our technology is designed to accomplish.

The physical electromagnetic radiation remains present and measurable. The device continues to function exactly as intended.

ProtectPro Technology addresses the corresponding informational level in Hyperspace. Using our proprietary technology, we nullify the disruptive harmful information associated with the radiation with the objective of addressing its harmful effect on biological entities like humans, animals, and plants alike.

This is the fundamental difference:

ProtectPro does not reduce the signal

ProtectPro is designed to nullify its harmful informational effect.

EMR Exposure Levels - Please be Aware.....

The physical EMR remains measurable even when ProtectPro Technology is applied. Therefore, it is important to understand the enormous differences in the electromagnetic-field levels to which we may be exposed.

You measure the speed of a car in miles per hour. You measure your weight in pounds. The international standard to measure EMR is microwatts per square meter ($\mu\text{W}/\text{m}^2$).

We as human beings are operating on electricity and without it our body (brain, heart, etc..) would not work. The human body itself has a natural electromagnetic field. Based on the values we use in our work, including those suggested by the late leading German building biologist Mr. Wolfgang Maes, we use approximately $80 \mu\text{W}/\text{m}^2$ as a natural biological reference level for humans. Mr. Maes warned to expose ourselves to more than $120 \mu\text{W}/\text{m}^2$.

German building-biological guidelines classify considerably higher levels of electromagnetic exposure into increasing categories of concern. Levels above approximately $1,000 \mu\text{W}/\text{m}^2$, Mr. Maes considered this exposure as extremely conspicuous.

Now compare these numbers with the exposure of a mobile phone:

Our human natural biological reference: approx. $80 \mu\text{W}/\text{m}^2$

Don't push more than: $120 \mu\text{W}/\text{m}^2$

High exposure is in the range of: $1,000 \mu\text{W}/\text{m}^2$

Mobile phone close to the body can reach around: $1,000,000 \mu\text{W}/\text{m}^2$ or more.

Does that make you concerned?

It made me very concerned and motivated me to create the solution with Protect Pro.

This enormous difference helps explain why we have devoted so much attention to EMR.

But it also brings us back to the fundamental principle explained earlier:

ProtectPro does not attempt to reduce these physical measurements. We cannot. Who can? Modern wireless technology has brought EMR into our homes and everyday lives. Or, as I sometimes put it: We invited the devil into our homes. If we have to live with the devil, we may at least want to put him in handcuffs.

A meter may continue to measure a very high physical EMR level after ProtectPro is applied. Our objective is different. We leave the physical signal intact so the technology can function, while ProtectPro Technology is designed to nullify its harmful effect at the informational level (Hyper Space).

The question therefore becomes: If an ordinary EMR meter cannot demonstrate this change, how can the effect of ProtectPro be tested?

This is where the work of the BESA Institute in Austria becomes particularly important.

Independent Testing — The BESA Institute

If ProtectPro does not reduce the physical electromagnetic field, an important question naturally follows: How can its effect be demonstrated?

For us, the answer was clear: we needed to examine what happens to your body when it is exposed to EMR — and compare the results with and without ProtectPro Technology protection. For this reason, we commissioned the BESA Institute in Austria to independently and scientifically test our products.

Over the years, BESA has conducted extensive scientific testing of all my ProtectPro products and other products I released with my company, IPC. Altogether, these investigations have resulted in more than 1,500 pages of test reports covering our entire product range.

We do not ask people simply to believe what we say. The extensive BESA test documentation and certificates are available on my various websites in Germany and in the USA for anyone interested in examining the results in greater detail under:

<https://emrprotection.co/besa-tests>

This testing is particularly important for understanding ProtectPro because we are not looking for a reduction in the physical EMR measurement but taming the lion.

The physical radiation can remain measurable.

The device can continue to operate normally.

The question is what happens to the biological entity exposed to it.

These tests clearly demonstrate the effect on the human body when using a mobile phone unprotected from EMR compared when the same person, same phone, same phone line is protected with ProtectPro “CELL”.

This is the level at which ProtectPro Technology is intended to demonstrate its effect.

From Testing to the Human Body

The BESA testing brings us to another important part of the ProtectPro concept: The human body is not simply matter. It is also an extraordinarily complex system of information and communication.

Within this framework, changes at the informational level in Hyperspace are understood to influence the corresponding biological entity in Reference Space through these interaction channels.

The physical body is visible. We can see and touch it. We can examine cells, tissues, organs, blood, bones, and many other biological structures. The corresponding informational level (Hyper Space) is not physically visible. According to Heim’s work, communication between these levels takes place through the interaction channels described earlier.

This principle is fundamental to our understanding of ProtectPro Technology. When information at the Hyperspace level is changed, that information can influence the corresponding biological entity in Reference Space through these interaction channels.

This is why ProtectPro does not attempt to physically change the electromagnetic radiation itself.

We address the information.

The interaction channels provide the connection.

The biological entity responds.

This concept also helps explain why we believe that the future of health and medicine will increasingly involve a much deeper understanding of frequencies and information.

For many years I have expressed this conviction in my seminars, workshops, and interviews:

**“The future of medicine will no longer be pills and white coats.
The future will be frequency medicine.”**

The more we learn about the role of information, frequencies, and communication within biological systems, the more possibilities may open for entirely different approaches to supporting health.

For ProtectPro, however, one question remains:

How do we nullify disruptive information without eliminating the physical frequency itself?

The answer brings us to one of the central principles behind our technology:

Inversion — The Principle Behind ProtectPro Technology

Inversion is a familiar concept in physics and mathematics. In very simple mathematical terms, $+2$ combined with -2 results in zero. One value is opposed by its corresponding inverse.

It is crucial to understand in life in general and in our case specifically:

Information can never be deleted.

Information remains in existence in our world of Quantum Physics.

The only way to stop any information from being effectful means one has to nullify it.

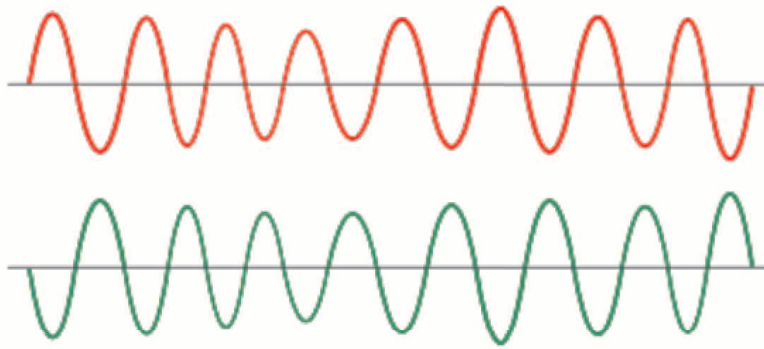

The word inversion is central to understanding how ProtectPro Technology is designed to work.

In conventional physics, we can see a comparable principle when two waves of the appropriate frequency and amplitude meet in opposite phase. They can interfere with one another and reduce — or under the right conditions cancel — the resulting amplitude. This is known as destructive interference.

ProtectPro uses the concept of inversion differently. We are not physically cancelling the electromagnetic wave. If we did that, the EMR meter would show the reduction and eventually, the communication technology itself could no longer function.

Instead, our proprietary inversion process operates at the informational level in Hyperspace. The physical frequency remains in Reference Space. The corresponding disruptive information is addressed in Hyperspace by introducing what we describe as its informational inverse.

Destructive Interference

Result
“0”

The objective is nullification:

Disruptive information + corresponding inverse information = nullified information

This distinction is extremely important.

We do not erase the information.

We do not block the physical frequency.

We do not reduce the physical radiation.

We nullify the disruptive information associated with it.

Think again about the mobile phone.

The phone continues communicating with the tower even if you do not actively use it. The signal remains present. The meter can still measure it. The call continues without interruption. But ProtectPro is designed to address the corresponding information in Hyperspace through our proprietary inversion process.

In simple basic math if you have value of +2 and you add a value of -2 the result is zero. Let's say the frequency of a harmful product – like a mobile phone – has the frequency of - 2. We program the frequency of + 2 and the result is zero. This frequency nullifies and so the -2 has no longer impact.

As I mentioned before:

One can not erase information. One has to nullify information.

ProtectPro does not erase information.

ProtectPro is designed to nullify its disruptive effect.

This is the principle we apply not only to mobile communication, but throughout ProtectPro Technology.

And this brings us to the next question:

How does a ProtectPro product know which information it is supposed to address?

The answer lies in the programming inside every ProtectPro product.

Programming ProtectPro Technology

Every ProtectPro product incorporates programming developed through years of research, observation, testing, and practical experience. These programs are designed to identify and address the informational patterns associated with the environmental influences for which each ProtectPro product was developed.

The programming is created using our specialized systems in Germany and incorporated into the individual ProtectPro products. This is important because different products have different purposes. A product developed for a mobile phone does not have the exact the same task as a product developed for a vehicle, a room, or a larger environment.

Yet the underlying principle remains the same

Identify the disruptive information.

Create its informational inverse.

Nullify the disruptive effect.

The physical source itself does not have to disappear and will not disappear.

The work of ProtectPro is to nullify the corresponding information in Hyperspace of products which are harmful.

Over the years, our programming has been expanded to address an increasingly broad spectrum of influences that we believe can affect your body or any biological system, including EMR from mobile communication, Wi-Fi and other wireless technologies; electrical and magnetic fields; high-voltage systems; AC and DC electrical sources; solar installations; dirty power; television and display technologies; LED and fluorescent lighting; blue light; cosmic influences; and other environmental factors.

As new technologies appear, new frequencies and potential influences must also be investigated. This is why ProtectPro Technology is not static.

We continue researching.

We continue testing.

We continue developing.

And when necessary, we update our programming and the products.

This becomes especially important as communication technology progresses from 4G to 5G to 6G and eventually beyond.

A ProtectPro product therefore represents much more than the material from which it is physically made.

The material is the carrier.

The programming is the intelligence.

The information is the key.

And this leads to another unusual characteristic of ProtectPro Technology:

Our products can be updated at any time even after you already purchased it.

Our Products can be upgraded after you buy them.

One of the many unusual features of ProtectPro Technology is that the programming of our products is not necessarily frozen at the time the product is manufactured. My product “CELL” mobile-phone protection provides a perfect example.

Many customers originally purchased their “CELL” when mobile communication was operating primarily with 4G technology. Later this product was programmed to address 5G as well. Then came the development of 6G. Although 6G is not yet in commercial use, I have already incorporated our 6G programming for all new products and for the products already in the possession of my clients.

Normally, a technological change of this magnitude might mean that an older product becomes outdated and eventually has to be replaced.

Not with ProtectPro Technology.

I have upgraded the programming of “CELL” and other ProtectPro EMR protective products already in use around the world, including the Smart Defender Series products in our 6G protection programming.

The remarkable part is what our customers did not have to do:

They did not have to ask for the upgrade.

They did not have to contact us.

They did not have to send their “CELL” (or other products) back.

They did not have to purchase a new product.

And they were not charged for the upgrade.

The CELL remained exactly where it was — with the customer's phone. I upgraded it remotely.

This means that a “CELL” originally purchased and programmed during the 4G or 5G era I upgraded it already as communication technology continued to develop. For us, this represents an entirely different philosophy of product development. We do not want to sell a customer a product today and simply abandon it when technology changes tomorrow.

When the technological environment changes, ProtectPro Technology will change with it.

And perhaps the simplest way to describe this extraordinary capability is:

The customer keeps the product.

We update the technology.

No return.

No replacement.

No additional charge.

When we see a need to upgrade our products we go to the drawing board and redesign our technology and programing. We just completed to upgrade from 5G to 6G EMR. Wherever you dwelled in the world at that very moment we upgraded our products you have in your possession. While you were sleeping we did it.

A Technology We Intentionally Keep Proprietary

By now, you may be asking:

How exactly does ProtectPro create, program, and transmit this informational inversion?

That is the one part of the story I cannot disclose in detail.

The precise methods, processes, programming, and technology used to create ProtectPro products are proprietary and remain an IPC company trade secret. However, I can clearly state this is only possible when applying Quantum Physics. I did already explain the principles behind our technology, including the concepts of Reference Space and Hyperspace, inversion, informational programming, and why we do not attempt to block or reduce the physical electromagnetic signal.

We also have our products independently tested by the BESA Institute and make the resulting documentation available on our websites - as indicated before. But there is a line between explaining what our technology is designed to accomplish and revealing exactly how we accomplish it.

That distinction is necessary to protect decades of research, development, experience, and intellectual property.

The principle can be explained.

The results can be tested.

The documentation can be examined.

The exact process remains proprietary.

This does not mean our work stops.

Quite the opposite.

ProtectPro Technology is dynamic. As new technologies and new potential environmental influences emerge, our team continues to research, develop, test our products, and when necessary upgrade our programming.

As explained — the worldwide upgrade of existing “CELL” — and other products PROTECTPRO from earlier 4G and 5G programming to our 6G programming is an example of this philosophy in action.

We developed ProtectPro not as a finished chapter, but as an evolving technology prepared for the next chapter.

A Different Perspective

It could be said that many products and technologies created through mankind's "inventive spirit" during the industrial age — particularly those involving electricity — may interact with living organisms in ways that nature never anticipated and may have unintended biological effects.

Not everything man invents is sensible or healthy. Not everything that can be done should be done. Some inventions should have never left the drawing board. They may be entertaining, some are sexy, sometimes practical, make our life and work easier. But some may be hostile to nature and to our long term survival that were never thought through or anticipated. In addition to our EMR products IPC offers various products, apart from EMR protective products, that support biological stability and deliver energy.

Within the framework described earlier, a person exists at the material level (Reference Space) and has a corresponding informational level (Hyperspace).

So changing the information in the Hyperspace with our ProtectPro Technology also changes the Reference Space through the so-called interaction channels existing between these 2 different spaces. So the matter in this person consequently changes. For example, if this information were healing information, then this change could possibly help to heal the sick matter (cells, cell groups, organs, etc.). This is why distant health analysis and distant healing may be possible - and telepathy as well.

Looking Ahead

ProtectPro Technology was never intended to be static but continues to evolve. Technology continues to change. New communication systems appear. New frequencies are introduced. Our electrical and digital environment continues to develop at extraordinary speed. Therefore, our work must continue as well. When new technologies emerge, the IPC team investigates them. When we identify new influences that we believe may be disruptive to humans, animals, and plants alike, we research how they can be incorporated into our ProtectPro programming. That commitment does not end when a product leaves our hands.

As demonstrated by our upgrade "CELL" and our other EMR protective products, already in the possession of our customers around the world, everyone can also benefit from future developments in our programming. Welcome on board and thank you for being our actual or potential client.

This is our commitment:

We keep researching.

We keep learning.

We keep developing.

ProtectPro keeps evolving.

Because technology will not stand still. Neither will we.

A Final Thought

When we began this journey, we asked a very different question from the one most people ask. We did not ask:
How can we eliminate or avoid modern technology?

Modern technology has become an extraordinary part of our lives. It connects families, businesses, countries, and continents. It allows us to communicate across the world within seconds.

We do not want to take that away. Our question was:

Can we keep the benefits of modern technology while addressing what we believe to be its harmful biological effects? That question ultimately became ProtectPro Technology.

Throughout these pages, I have tried to explain the thinking behind our work as simply and transparently as possible. You do not need to understand or become an expert in every equation of Quantum Physics. You do not need to understand every detail of Reference Space, Hyperspace, interaction channels, inversion, or informational programming.

I simply want you to understand the principle:

We do not fight the technology.

We do not block the signal.

We do not reduce the radiation.

We address the information

We make the adaptations needed to avoid harm of certain technologies while keeping their full advantage for what they have to offer. And that principle has guided our work from the beginning. There will always be more to discover. There will always be more questions to ask. As long as technology continues to evolve, we intend to continue asking those questions.

Because my philosophy has remained the same throughout my life:

The more you know, the more you send

I am always available to you. My contact information can be found on page 1

With my very best regards,

In Love & Gratitude
